3. OTC MARKET MICROSTRUCTURE: VOLUME VS. CARRY-FORWARD PRICING

- In over-the-counter (OTC) and Pink Sheet micro-cap securities, market data feeds use standardized end-of-day quoting conventions:
- " Quoted Price vs. Active Trading: When no trades occur during a trading session, the exchange displays the last closing transaction price as the Open, High, Low, and Close for that session. This prevents quote display gaps but does not indicate active trading.
 - " Volume = 0 Conclusiveness: Under FINRA and OTC reporting rules, any actual trade execution must be reported with positive share volume. A volume of 0 conclusively proves that no clearing, market-making cross, or retail/institutional trade executed on that date.
 - " Forensic Significance: The \$1.05 print on July 13, 2023 is solely a reflection of the June 7, 2023 trade carried forward through the hiatus.
